

WIRELINE SERVICES

Our Unconventional Wireline and Pressure Control service teams bring deep experience, advanced equipment, well optimization techniques and service excellence to every job. We have successfully run tens of thousands of multi-stage plug-n-perf completions across the longest laterals in North American shale wells. Our expert service teams are dedicated to safety and quality. Let us show you the difference.

SKYVIEW WIRELINE TRUCK

Our advanced pump-down unit allows you to go farther, deeper, faster and safer, so you can gain efficiency and uptime on every job. SkyVIEW provides 90° visibility, so you can reduce risks around the job. A removable drum allows fast cable switching, and independent hydraulic and electric power keeps you pumping in all conditions.

COATED WIRELINE

Reduce friction more than 40% and run in twice as fast as traditional pump-down operations. Coated Wireline reduces injector oil consumption by 95%, delivers the electrical properties of 9/32 E-line and the pressure-control capabilities of slickline. You're able to run faster, cleaner, safer, more reliably and more efficiently.

UNCONVENTIONAL WIRELINE SERVICES

Multi-Stage Pump-Down Plug-n-Perf Services

- Coated line + Pre-Job Wellbore Modeling

Turnkey Toe Prep Packages

- Unconventional TCP or Tractor Services Available
- Unconventional Wireline + Pump-Down Trucks with Acid Services

Standalone Pressure Control & Quad Latch Service

CONVENTIONAL WIRELINE & TCP SERVICES:

Perforating & Pressure Control

- Conventional Multi-Stage Perforating
- Disposal Well Services
- Squeeze Jobs
- Tubing Conveyed Perforating
- Thru-Tubing Perforating
- Tractor Services

Standalone Pump-Down trucks

Standalone Acid Services

Remedial Wireline Services

- Cast Iron Bridge Plugs & Cement Retainers
- Packer Setting Service
- Retrievable Bridge Plug Services
- Downhole Camera Conveyance Service

Cased-Hole Logging Services

- Radial Bond Logging
- Compensated Neutron
- Temperature Surveys
- Multi-Finger Caliper
- Memory Tools

UNCONVENTIONAL WIRELINE & PCE DIVISIONS

9313 W IH 20
Midland, TX 79706
T: 432-848-0262

DELAWARE LOCATION - STAGING

3424 Northwest County Road
Hobbs, NM 88240

NINE IS NEARBY

Nine has delivered the full range of completions services to the Midland – Monahans area for decades, and is pleased to announce our expansion into South Texas.

NINEENERGYSERVICE.COM

**MAXIMIZING
PRODUCTION THROUGH
BETTER COMPLETIONS**

COMPLETIONS TECHNOLOGIES

SCORPION™ FRAC PLUGS

Shorter composite plugs that can be quickly drilled out and extended-range plugs with smaller O.D.

DISSOLVABLE FRAC PLUGS

Eliminate the need for well interventions, while helping operators dramatically improve their operational efficiencies.

MAGNUMDISK™

Provides exceptional performance in isolating wellbore reservoir pressure.

SMARTSTART PLUS®

Time-delay test + frac valve for stage-one stimulation.

BREAKTHRU™ CASING FLOTATION DEVICE

Enables operators to float casing to total depth and maximize operational efficiencies.

MONAHANS-COILED TUBING

1101 South Lopp Road 464
Monahans, TX 79756
T: 432-943-4501

CEMENTING AND DRILLING

Our cementing experts look at all facets of your project – geologies, parameters, challenges and goals. We develop a custom solution, bringing together innovative slurries, modern equipment, advanced modeling technologies and steadfast service. Then we execute to perfection.

CPT TRIDENT

Innovative low-density slurry (10 – 10.8 lb/gal) that achieves a respectable compressive strength within 24 hours and does not require hollow glass spheres (HGS). The elimination of HGS allows for reduced material costs and does not require on-site batch mixing and the associated equipment. Reach zonal isolation, reduce cost and achieve cement to surface with this proprietary blend of CPT-Trident.

RAPID SET 1

Run your cement and get back in the hole faster. Rapid Set 1 sets in about six hours, reducing your cement wait times to a minimum, so you can move to the next phase of your completion and ultimately save rig time.

NINE LITE

Achieve the weight and density attributes needed to cement the most mature formations in the Permian. Our specialists will analyze your formation and customize the slurry to optimize efficiency and well economics.

BREAKTHRU™ CASING FLOTATION DEVICE

Forget ceramic plugs and debris traps. Our advanced device allows you to complete your well all the way to TD and gain at least 20 more feet of pay zone, so you can optimize production and boost EUR.

PLEASANTON-CEMENTING

496 Shale Rd
Pleasanton, TX, 78064
Dispatch: 830-480-0603

PIPE RECOVERY & REMEDIAL WIRELINE

For decades, our remedial and pipe recovery experts have delivered the full range of services to Midland and South Texas markets. A team which brings an average of over 20 years of experience in these regions.

PIPE RECOVERY SERVICES

FREE-POINT INDICATOR

BACK-OFF AND SEVERING SERVICES

- Drill Collar Severing tools available

JET CUTS

CHEMICAL CUTS

RF SAFE DETONATORS

REMEDIAL WIRELINE SERVICES

- Cast Iron Bridge Plugs & Cement Retainers
- Packer Setting Service
- Retrievable Bridge Plug Services
- Downhole Camera Conveyance Service

CASED-HOLE LOGGING SERVICES

- Radial Bond Logging
- Compensated Neutron
- Temperature Surveys
- Multi-Finger Caliper
- Memory Tools
