

EXTREME DUAL MAGNUMDISK™

INNOVATION REVEALED

The **Extreme Dual MagnumDisk™** isolates wellbore reservoir pressure utilizing two dome-shaped disks. The **MagnumDisks™** are made of a proprietary material that gives them incredible strength and durability in a variety of downhole conditions up to 15,000psi (103.4MPa).

The **Extreme Dual MagnumDisk™** sub is run on the bottom of the tubing and/or below a packer BHA to isolate the tubing and act as a barrier to set hydraulic set packers. After all tests are performed, the **MagnumDisks™** are knocked out using a **Magnum Go-Devil Drop Bar™**, coiled tubing, slickline, or sand line. Once the disks are removed, the wellbore fluids can then be produced up the production tubing.

FEATURES

- Used as barrier to set hydraulic packers
- Allows for tubing tests up to 15,000 psi (103.4MPa)
- Economical alternative to profile nipple with a plug
- Eliminates plug & prong removal runs
- Full bore opening to tubing I.D. after MagnumDisks™ are removed
- Gas bubble rated available
- Used to negative test liner top
- Available with premium threads and materials
- Maximum surge potential of formation after perforating
- Can be run in hostile environments (H2S and CO2)
- 400°F (204°C) rated
- Can be run in heavy mud environment
- Little to no interfering debris left in the wellbore
- Can be pressure tested prior to installation
- Patented Technology
- Used for snubbing applications in live wells*

Available with Mule
Shoe Wireline
Re-Entry Guide

*Magnum Oil Tools recommends the use of the Extreme Dual MagnumDisk™ for snubbing operations, as long as the pressure control company and/or operator have procedures in place to secure/control the well in the unlikely event of tool failure.

MagnumDisk

Description inch (mm)	Tool O.D.* inch (mm)	Tool I.D. inch (mm)	Bottomside Disk Rating	Topside Disk Rating
2-3/8 (60.3)	3.25 (82.6)	2.00 (50.8)	15,000 psi (103.4MPa)
