

PERF FRAC DIVERTER

This product may be covered by one or more patents or pending patent applications.

INNOVATION REVEALED

Boosting well productivity while lowering completion costs and risks, the Perf Frac Diverter from Nine provides an economic advantage for most downhole operations.

Dropped from surface, the highly engineered design allows for clusters of this tool to insert themselves into the casing perforation which requires the largest amount of frac fluid. Once the diverter is successfully lodged, frac fluid will then be diverted to other perforations in the casing string. These tools do not require drillout and are completely dissolvable.

Features

- 10,000 psi rated
- Fully dissolvable
- Anchor in perf during frac
- Overall length of 1.75" and diameter of 0.88"
