

QUICKSTART® INJECT + FRAC VALVE

The QuickStart® Inject + Frac Valve provides the operator with an initial point to break down the formation and established a pump-in port for use in long horizontal completions. The device is comprised of an opening piston that is controlled by a special rupture disc.

The QuickStart Frac Valve(s) are run as an integral part of the casing string and may be utilized in both cemented and un-cemented well bores.

Features and Benefits

- One piece mandrel design providing a very robust tool. Burst pressure rating up to 20,000 psi.
- Port Jetting™ Technology improves injectivity to formation.
- Opening sequence is controlled by a fit for purpose rupture disc that is designed to resist the plugging or bridging at the membrane.
- Mandrel design with TORQ Thru Technology maintains casing string integrity and yield torque ratings. The tool can be “through torqued” onto the casing string for ease of make up.
- High torque casing connections for ease in matching any number of today’s requirements.
- Exceeds all safety and environmental standards.
