**SLASH EMISSIONS AND MAINTAIN EFFICIENCIES
ACROSS YOUR WIRELINE OPERATIONS**

Electric Wireline From Nine

CUT EMISSIONS

Nine's Electric Wireline Truck, powered by Texas Wireline's Fuzion™ EcoPax, is among the most advanced battery-based power packs in the industry. No more rumbling, fuel-thirsty engines spinning the drum to push the line downhole. Instead, you're running reliably, quietly, cleanly and quickly at 4X the power of traditional wireline trucks — all while reducing emissions to almost nothing.

The EcoPax is engineered to have triple-redundant recharging for the lithium-ion battery pack. During operations, the turning of the drum works to recharge your battery — that's recharge option number one. Next up, the small onboard motor helps to provide charging power. And finally, an umbilical can tap into any other 480V power source that is available onsite. Bottom line, your wireline operation stays powered up and your carbon impact stays down.

TEXAS WIRELINE'S FUZION™ ECOPAX KEY FEATURES:

- Significantly reduces emissions compared to traditional wireline
- Eliminates hydraulic failure NPT risks
- 4X the power of traditional wireline
- 68 dB quiet operations
- Manual joysticks with brake control
- Fuzion dashboard for robust data control

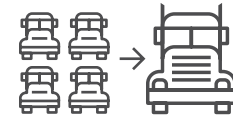

SAFER IS BETTER

Any time you can make a worksite cleaner and quieter, it becomes a better environment for your crews. And that's just the beginning of the safety gains you get with E-Wireline. Reaction time is much quicker during pump down and other procedures involving tension on the line versus hydraulic systems. This maximized drum efficiency reduces water usage during pump down, which means fewer people need to be near the active operation working the job.

BOOST EFFICIENCY REDUCE EVERYTHING ELSE

The Fuzion system has proven its efficiency-boosting qualities many times over in the field. It has run more than 200 pump downs, setting plugs on every one and firing more than 2,200 guns — with zero misfires.

Nine's E-Wireline is a surefire way to increase productivity. Equally important are the things it can reduce: Worksite footprint, fuel consumption, noise, water requirements, used oil and filter disposals, crew counts, failure risks. And the two most important things it reduces — carbon emissions and NPT.
